

Shield connector SM-clip

Assembly instructions

The distance between the cores and the shielding of the cable is first increased by means of the assembly tool.

The shield connection clip is placed on the cable sheath between the cores and the inside of the cable sheath by means of a pair of tongs.

... And slid onto the cable sheath up to the connecting section.

The upper and the lower strap of the shield connection clip are pressed in the region of the connecting section until the retaining teeth penetrate the cable insulation.
